# DECLARATION OF CONFORMITY

**SUBJECT: Statement of compliance to RoHS and R.E.A.C.H.**

LGB srl does not manufacture or import chemical substances (as such or in preparations or in articles), however as users of preparations, we have the interest and need to receive information from our Suppliers.

As manufacturers of electric motor pumps and electric motors, we are in fact considered "downstream users" of the various activities involved in accordance with the Normatives and the Regulations in question, therefore we do not need to make pre-registrations for our products as such.

However, with respect to the realization of the individual components that make up the articles supplied to you, we have proceeded precisely to request information from our suppliers and we have obtained the confirmation of their active involvement in the production process in order to provide for the registration of the substances used.

Currently, the products supplied by LGB srl, do not contain any problematic substances for human health present in the lists of the above Directives.

We will keep you updated on the substances that may be added to such restrictions and we will inform you in the event that these were contained in the articles supplied to you in concentration higher than the percentage granted.

Giorgio Lovisetto  
LGB Managing Director
